

I S A

Intelligent Sensing Anywhere

## iGasDisplay

iGasDisplay is a solution devised to remotely monitor the level of gas in a tank.

The user can easily read information on the tank level in the comfort of their own home.

Moreover, this system allows the remote monitoring of replenishments. With this information available, replenishments can be carried out in a safe way and all risks related to overflowing are avoided.

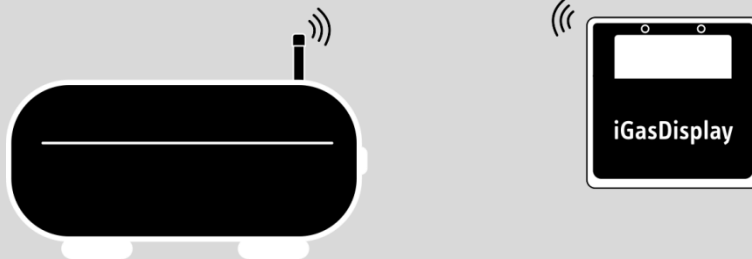

### Features

- Transmission of data every hour
- Range up to 150 m
- Battery powered
- Easy installation
- Display of the percentage of gas in the tank
- Monitoring of up to 9 tanks

## Solution:

The system receives information on the tank level through a radio transmitter installed in the gas tank. This information is periodically updated and made available to the user through the display.

### Applications:

- Hotels
- Restaurants
- Homes
- Support to the gas company driver

Easy access to tank level information

The equipment is portable and operates on low consumption batteries

Avoiding gas supply interruptions

## Technical Specifications

- Powered by 3.6 V batteries
- 868 MHz radio frequency
- Display communication through C2 interface
- Low-consumption microcontroller
